           AAG90418
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 g
                                   ŏ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to proteins encoded by the benzothiophene oxidase (bto) gene cluster from Pseudomonas sp. WF505, specifically the protein which controls expression of the gene cluster (AAY97827), the benzothiophene oxidase (bto) enzyme itself (AAY97825) and a benzothiophene oxidase co-enzyme (AAY97824), which controls benzothiophene activity via redox regulation. These enzymes are benzothiophene activity via redox regulation. These enzymes are respectively encoded by the bto gene cluster open reading frames ORF2-16 (AAA38398), ORF4-9 (AAA38395) and vectors comprising the genes encoding encompasses genetic constructs and vectors comprising the genes encoding production of the enzymes. Pseudomonas sp. WF505 benzothiophene oxidase, benzothiophene oxidase co-enzyme and bto gene cluster regulator are useful in the desulfurisation of crude oil and petroleum products, and conthe clarification of soil and waste water contaminated by organic sulphur compounds. Sequences AAY9819-Y97829 represent the proteins encoded by the genes of the Pseudomonas sp. WF505 benzothiophene oxidase
                                   .;

The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Gorynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel polynucleotides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous gene

The assay can be used to identify fragments pref. transmembrane fragments, from G-protein coupled receptor (GPR) proteins (see AAR48686-R48758 for examples) which retain blological activity such as binding a GPR ligand or modulating GPR ligand bloingida a CIPR (see AAR48759-R48758) AAR50569-R50807 and AAR89189-R48758 for examples of polypeptide fragments). The polypeptide fragments can be used in compositions for treating subjects suffering from a pathology related to a GPR abnormality e.g. a psychotic disorder such as schizophrenia.
               transmembrane domains of adrenergic receptors, used in a G-protein coupled receptor ligand binding assay. The assay can be used to outled the used to coupled receptor (GPR) proteins (see AAR48686-R48758 for examples) which retain biological activity such as binding a GPR ligand or modulating GPR ligand binding to a GPR (see AAR48758, AAR50569-R50807 and AAR89189-R89195 for examples of polypeptide fragments). The polypeptide fragments can be used in compositions for treating subjects suffering from a pathology related to a GPR abnormality e.g. a psychotic disorder such as schizophrenia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  psychotic disorder; schizophrenia; dopamine; cAMP; adenosine; thrombin; muscarinic acetylcholine; adrenergic; endothelin; bombesin; endocrine; rhodopsin; opsin; odorant; cytomegalovirus; serotonergic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Peptides AAR50808-14 are peptides based on serotonergic receptor (5-HT)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 G-protein coupled receptor; ligand binding assay; transmembrane domain;
                                                                                                                                                                                                                                                                                                                  Gaps
 The sequence of a polypeptide, based on the consensus sequence from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Polypeptides of G-coupled receptor proteins (GPRs) - useful for binding GPR ligands or modulating GPR binding
                                                                                                                                                                                                                                                                                                                  ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The sequence of a polypeptide, based on the serotonergic receptor (5-HT) transmembrane domain consensus sequences, used in a G-protein coupled receptor ligand binding assay. The assay can be used to identify fragments pref. transmembrane fragments, from G-protein coupled receptor (GPR) proteins (AAW02657-W02730) which retain biological activity such as binding a GPR ligand or modulating GPR ligand binding to a GPR (see AAW02747-W0299) for examples of polypeptide fragments). The polypeptide fragments can be used in compositions for treating subjects suffering from a pathology related to a GPR abnormality e.g. a psychotic disorder
                                                                                                                                                                                                                                                                                                                                                                                                                                           G-protein coupled receptor; ligand binding assay; transmembrane domain; schizophrenia; dopamine; cAMP; adenosine; thrombin; adrenergic; opsin; muscarinic acetylcholine; endothelin; bombesin; endocrine; rhodopsin; odcant; cytomegalovirus; serotonergic.
                                                                                                                                                                                                                                                                                                                                                                              G-protein coupled serotonergic (5-HT) receptor consensus sequence #4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New dopamine receptor peptide - useful as antipsychotic agent, e.g. for treating schizophrenia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      0;

                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAY34584-Y35879 represent the proteins encoded by all the open reading frames in the complete ganome (see AAX91990) of Chlamydia pneumoniae. C. pneumoniae causes respiratory diseases such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent otitis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAY34584-Y35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae mucleotides sequences an also be used as immunogenic compositions, especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.
                                                                                                            Respiratory disease; pneumonia; bronchitis; heart disease; sarcoidosis; sinusitis; purulent otitis media; erythema nodosum; pharyngitis; vaccine; neutralising epitope.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 1, Application US/08606144

Patent No. 5834262

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: DAVID LEROY ANTON
TITLE OF INVENTION: OXIDATION OF GLYCOLIC ACID TO
TITLE OF INVENTION: GLYCOXYLIC ACID USING A
TITLE OF INVENTION: MICROBIAL CELL TRANSFORMANT
TITLE OF INVENTION: AS CATALYST
TITLE OF SEQUENCES: 3
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 OXIDATION OF GLYCOLIC ACID TO

Sequence 10, Application US/08843417

Patent No. 6184349

APPLICANT: Belgado. Stephen G

APPLICANT: Rabert, Douglas K

TITLE OF INVENTION: TETRODOTOXIN-RESISTANT SODIUM CHANNEL alpha-SUBUNIT

TITLE OF INVENTION: TETRODOTOXIN-RESISTANT SODIUM CHANNEL alpha-SUBUNIT

TITLE OF INVENTION: TETRODOTOXIN-RESISTANT SODIUM CHANNEL Alpha-SUBUNIT

NUMBER OF SEQUENCES: 10

CONFESSED: Heller Emman White & McAuliffe

STATE: CA

COUNTRY: U.S.A.

ZIP: 94301

COMPUTER: IBM PC compatible

COMPUTER: IBM PC compatible

COMPUTER: IBM PC compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTHARE: PatentIn Release #1.0, Version #1.30

CURRENT APPLICATION DATA: US/08/843,417

FILING DATE: APPLIA 15, 1997

CLASSIFTATION NUMBER: 31,796

ATTORNEY/GENT INFORMATION:

REFERENCE/DOCKET NUMBER: 2844-791

TELECOMMUNICATION INPERMATION:

TELEPONE: (415)-324-0038

TELEPONE: (415)-324-0038

TELEPONE: (415)-324-0038

TELEPONE: (415)-324-0038

TELEPONE: (415)-324-0038

TELEPONE: (415)-324-0038

Sequence 32. Application US/08975080

Patent No. 6245523

GENERAL INFORMATION:

APPLICANT: ALILEAT, Dario C.

TITLE OF INVENTION:

TITLE OF INVENTION: CELLULAR APOPTOSIS, AND ITS MODULATION

CORRESPONDENCES: 35

CORRESPONDENCE ADDRESS:

ADDRESSEE: MORGAN, LEWIS & BOCKIUS LLP

STREET: 1800 M Street, N.W.

CITY: Washington

STATE: D.C.

COUNTRY: USA

ZIP: 20036-5869

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 29, Application US/08975080

Patent No. 6245533

GENERAL INFORMATION:
APPLICANT: Altieri, Dario C.
TILLE OF INVENTION: SURVIVIN, A PROTEIN THAT INHIBITS
TITLE OF INVENTION: CELLULAR APOPTOSIS, AND ITS MODULATION
NUMBER OF SEQUENCES: 35
CORRESPONDENCE ADDRESS:
ADDRESSEE: MORGAN, LEWIS & BOCKIUS LLP
STREET: 1800 M Street, N.W.
CITY: Washington
STATE: D.C.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A; Map position: 7q31.3-7q32
C; Function:
A; Description: catalyzes the oxidation of inosine 5'-phosphate by NAD and one molecule c
A; Pathway: purine nucleotide biosynthesis
C; Superfamily: IMP dehydrogenase; CBS homology; IMP dehydrogenase amino-terminal homolog
C; Keywords: duplication; GMP biosynthesis; NAD; oxidoreductase; purine nucleotide biosyn
F; 30-96/Domain: IMP dehydrogenase amino-terminal homology <IDHN>
                                                                                                                                                                 IMP dehydrogenase (EC 1.1.1.205) I - human
N;Alternate names: IMP:NAD+ oxidoreductase; IMPDH; inosine-5'-monophosphate dehydrogenag
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A;Note: the sequence in GenBank entry HUMIMPH, release 103, (PID:9307067) has 273-Phe, 2
C;Comment: mRNA for IMP dehydrogenase I predominated in normal leukocytes, whereas that

IMP dehydrogenase (EC 1.1.1.205) impdh - fruit fly (Drosophila melanogaster)
N;Alternate names: IMP:NAD+ oxidoreductase; IMPDH; inosine-5'-monophosphate dehydroge C;Species: Drosophila melanogaster
C;Species: Drosophila melanogaster
C;Deccies: Drosophila melanogaster
C;Deccession: S41064; S61482
R;Sifri, C.D.; Wilson, K.; Smollk, S.; Forte, M.; Ullman, B.
Biochim. Biophys. Acta 1217, 103-106, 1994
A;Title: Cloning and sequence analysis of a Drosophila melanogaster cDNA encoding IMP A;Reference number: S41064; WUID:94114565
A;Accession: S41064
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             A,Molecule type: mRNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RESULT 6
559508
IMP dehydrogenase (EC 1.1.1.205) ras - fruit fly (Drosophila sp.)
NyAlternate names: IMP:NAD+ oxidoreductase; IMPDH; inosine-5'-monophosphate dehydroge C; Species: Drosophila sp.
C; Species: Drosophila sp.
C; Accession: S59608
R; Slee, R; Bownes, M.
Mol. Gen. Genet. 248, 755-766, 1995
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A;Description: catalyzes the oxidation of inosine 5'-phosphate by NAD and one molecul A;Pathway; purine nucleotide biosynthesis
C;Superfamily: IMP debydcogenase; CBS homology; IMP dehydrogenase amino-terminal homo C;Keywords: duplication; GMP biosynthesis; NAD; oxidoreductase; purine nucleotide bio
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             A;Description: catalyzes the oxidation of inosine 5'-phosphate by NAD and one molecul A;Pathway: purine nucleotide biosynthesis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Mol.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           JT0565

IFF dehydrogenase (EC 1.1.1.205) - mouse
N:Alternate names: IMP:NAD+ oxidoreductase; IMPDH; inosine-5'-monophosphate dehydrogenas
C;Species: Mus musculus (house mouse)
C;Date: 13-Nov-1998 #sequence_revision 13-Nov-1998 #text_change 05-May-2000
C;Accession: JT0565; A34375; S42724
R;Tiedeman, A.A.; Smith, J.M.
A;Title: Isolation and sequence of a cDNA encoding mouse IMP dehydrogenase.
A;Reference number: JT0565; MUID:91153661
A;Accession: JT0565.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A.Molecule type: mRNA

A; Description: catalyzes the oxidation of inosine 5'-phosphate by NAD and one molecul A; Pathway: purine nucleotide biosynthesis
C; Superfamily: IMP dehydrogenase; CBS homology; IMP dehydrogenase amino-terminal homo C; Keywords: GMP biosynthesis; NAD; oxidoreductase; purine nucleotide biosynthesis F;37-103/Domain: IMP dehydrogenase amino-terminal homology <IDHN>
F;237-235/Domain: BMP biosynthesis; NAD; oxidoreductase; purine nucleotide biosynthesis F;37-103/Domain: BMP dehydrogenase catalytic homology <IDHC>
F;236-403/Domain: IMP dehydrogenase catalytic homology <IDHC>
F;335/Active site: Cys #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               IMP dehydrogenase (EC 1.1.1.205) T22D1.3 - Caenorhabditis elegans
N;Alternate names: IMP:NAD+ oxidoreductase; IMPDH; inosine-5'-monophosphate dehydroge
C;Species: Caenorhabditis elegans

C:Comment: This sequence is very similar to IMP dehydrogenase at the amino end
ke the latter, the two CBS domains are missing or degenerate.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RESULT 22
S54810
probable oxygenase - Streptomyces fradiae
C;Species: Streptomyces fradiae
C;Species: Streptomyces fradiae
